Relevant Work

Project Let's Eat (full-Stack Application) team project

- The site gets 4 random recipes based on the user's food preference and will give users the ability to add, edit ,and delete their recipes as well as be able to see all the recipes .
- My team used node,express,ejs , javascript, mongoose, and heroku to deploy

Project Movies Book (full-Stack Application) Team Project

- A social media site about movies allowing user to leaves comments and add their favorite movies
- My team used python and Django for auth, movies and used a movie api , and used heroku to deploy

Project Character Bank

- A Full stack that lets users make and store their character and share with other user on the app
- I used react for the front and built api for my backend using node and mongodb

Project UNO (Front-End application) solo project

- Play a game uno with up to three computer players. With all the special cards and action of a regular game of Uno.
- I used javascript for all the game logic and a little custom css to style the page and hosted on github
